# Project1 - eLibrary - Part2: Developing the eLibrary as a SPA - eLibrarySPA

For this Part 2 of the eLibrary Project 1, you are required to implement your solution as a **Single-Page** Application (SPA). i.e. one that does not violate the "DRY" principle of Software Development.
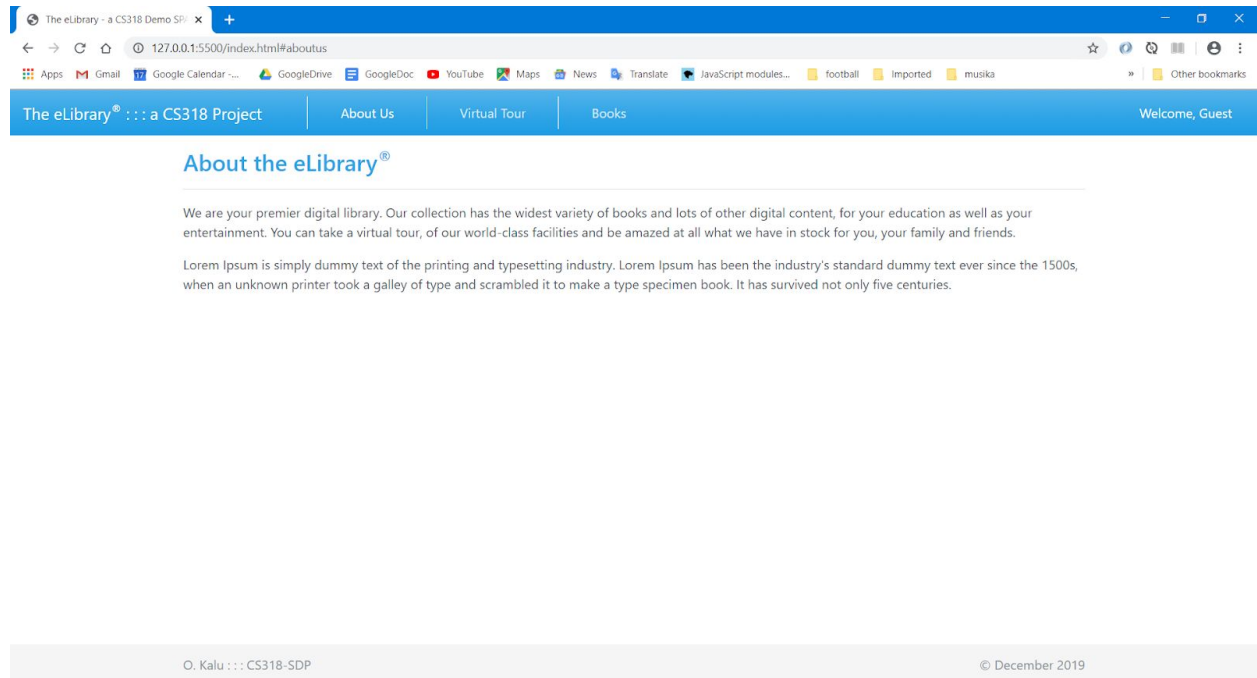

Note: One of the challenges of having a Single-Page Application is the fact that it breaks the Browser's built-in navigation buttons for moving "Backward" and "Forward" between UI pages. In your code implementation, ensure that this breakage is rectified, by adding necessary code and structuring your solution such that the state of the browser's history is correctly maintained; and the navigation with the "Back" and "Forward" buttons work correctly, as expected.

About the eLibrary®

We are your premier digital library. Our collection has the widest variety of books and lots of other digital content, for your education as well as your entertainment. You can take a virtual tour, of our world-class facilities and be amazed at all what we have in stock for you, your family and friends.

Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book. It has survived not only five centuries.
